RPT6000 Hayden Schmidt Peer Review

Working with Hayden was a very positive experience. I would go as far as to say Hayden was invaluable for this project. With how fast we went through the concepts and the constant bugs we faced it became necessary to have someone else tracking new details while the other person debugged.

Hayden did an excellent job at keeping track of what we were currently doing while I scrawled through the code trying to find bugs. I wasn't able to watch along as we did copybooks since I was looking for a bug but Hayden paid attention in my stead. He was able to explain how they work in his GitHub commits so I could learn how they work and add them in after the bug was fixed despite not paying attention during the lecture.

Something I would like to see out of Hayden is more public repositories on his GitHub. Hayden is definitely a talented programmer and from the times that I've conversed with him he seems to have personal projects that he wants to work on. I would love to see these projects on his GitHub and I'm sure employers would as well. Since I know Hayden is a Python guy I might suggest a project with Django if he feels comfortable enough with Python to delve into more advanced applications of the language.

Full stack engineering can be a very educational experience and improve your skills as a programmer by a large margin since you must become very familiar with some very abstract concepts.

Overall, I don't have much negative to say about my experiences with Hayden. I talk with him often and I get the impression that he is a very talented and driven software engineer, give him a few years and he'll be a pro.
